(iii) Main runway at Madras has since been extended. A parallel taxi track has been planned at Bombay airport by relocating the Airport Surveillance Radar. At Calcutta also IAAI proposes extension of the parallel taxi way.

(iv) At Delhi airport, Category II lighting system became non-functional due to recarpeting of runway; the system has since been made functional. At Bombay airport, Category II Instrument Landing System could not be commissioned due to obstruction caused by hutments on the encroached land in the approach funnel of the runway and a hillock near the airport. However, the lighting system has been upgraded to Category II level to facilitate landing.
